

A'ROMANTIC™

Health Beverage

Made from a combination of premium ingredients, bee pollen, pearl, pumpkin flower and barley, one serving of A'ROMANTIC™ provides 14% of your daily calcium requirement from easily absorbed, natural pearl powder! And with its rich, coffee flavor and no caffeine, you'll probably want to enjoy more than one serving a day!

Bee pollen is rich in amino acids that are essential to life and is easy for the body to assimilate. It helps strengthen the immune system and circulatory system. Other nutrients in bee pollen include lecithin and large amounts of vitamins A, C, D, E and B complex.

Pearl's high calcium content can help stimulate bone marrow cells and new bone formation. Research also indicates that pearl may help support nervous system function. Pearl may also help improve skin condition and the digestive system.

Research has found that pumpkin flower is high in carotene, which may help with insomnia, high blood pressure and heart function.

Barley is high in amino acids, vitamins, protein, carbohydrates, minerals and beta-glucan. Beta-glucan is a soluble fiber that promotes the growth of beneficial bacteria in the colon and helps prevent absorption of fats and cholesterol in the intestine.

A box of A'ROMANTIC™ contains 30 individually packaged servings to easily take with you wherever you go!

E. EXCEL Nutritional Immunology®

Prevention Over Cure

Nutritional Immunology is a relatively new science pioneered by E. EXCEL's founder, Dr Jau-Fei Chen. It studies the close relationship between nutrition and the immune system. Dr Jau-Fei Chen's research shows that consuming healthy foods strengthens the immune system; a strong immune system can defend us from most illnesses. Nutritional Immunology emphasizes consuming natural, wholesome foods for good health and does not endorse consuming chemically processed foods. This science surpasses the study of basic nutrients essential for survival such as vitamins and proteins. Instead, Nutritional Immunology researches how antioxidants, phytochemicals and polysaccharides help boost the immune system.

Nutritional Immunology emphasizes prevention over cure. Health problems can be better prevented if we provide our immune system with proper nourishment daily.

Our Manufacturing Processes

E. EXCEL's formulates its products on the science of Nutritional Immunology. We have spent much time and effort on our manufacturing processes, which include:

- Researching the different types of plant food that contain the most abundant phytochemicals, antioxidants and polysaccharides;
- Studying which plant species is most beneficial to the human immune system. For example, there are over 80 species of ginger but all contain varying amounts of nutrients;
- Analyzing which parts of a plant are most nutritious;
- Selecting the most appropriate harvest time. For example, the older the ginseng, the better it is, as ginseng harvested at a young age yields little nutritional benefit. Mushrooms should be harvested when they are still young to obtain optimum quality;
- Using appropriate processing techniques, i.e., some plants must be heated before use while others should not be heated.

E. EXCEL's products are effective because of the amount of research and professional expertise devoted to each product formulation. Every single product is highly concentrated and packed using state-of-the-art technology to ensure that nutrients will not be lost.

E. EXCEL's products are not medications. They are botanical food products based on the science of Nutritional Immunology to supplement your nutrient sources and help provide balance to your daily diet.

E. EXCEL's products are not intended to diagnose, treat, cure or prevent any diseases and should not be used as a substitute for professional medical diagnosis and treatment. If you experience any discomfort, please consult your doctor for advice.
