

VegiWash®

Family Care

Farm produce is often sprayed with pesticides, weed killers and disinfectants. This helps raise farm yields and protects the attractive appearance of the crops. The global usage of pesticide on farm produce is on the rise. However, pesticides are extremely harmful to human health. Their chemical residues can cause side effects such as nervous system problems, birth defects, lowered learning ability and organ damage.

Approximately 95% of all vegetables and fruits have surface chemical residue. Even organically grown produce may have some chemical residue due to contaminants in the soil.

VegiWash uses the finest plant-derived ingredients to effectively remove pesticides, wax and chemical pollutants on the surface of produce. It ensures that fruits and vegetables are clean and safe to consume without affecting taste. After washing fruits and vegetables in VegiWash solution, just rinse with clear water to remove any residues.

Use VegiWash to protect your family from harmful pesticides while enjoying peace of mind.

Use one capful per gallon (3.7856 litres) of water. Let produce soak in VegiWash for 1 minutes. Rinse well with water. For best results, do not re-use VegiWash solution for cleaning other fruits and vegetables.

E. Excel Nutritional Immunology®

Prevention Over Cure

Family Care Products

Our mission at E. Excel International is to share the gift of health and the knowledge of E. Excel Nutritional Immunology® with the world. This is not merely a statement, but a promise of our commitment. And, because E. Excel has the knowledge, leadership and products to promote healthy living, we have an opportunity to make a difference.

In today's world health community, E. Excel International serves as the leader in the field of Nutritional Immunology, a science that focuses on the delicate balance between nutrition and our ability to maintain optimal health.

E. Excel's family care products were designed with the health and hygiene needs of the modern family in mind. They provide the means for us to help protect ourselves from the many germs, bacteria and environmental hazards found in the world today.

Many kinds of microorganisms can be found on our own skin and the surfaces of the foods we eat. Many of these organisms, such as *Staphylococcus Aureus* and *E. coli*, are known to cause illness. It is in our best interests to make sure that as few of these microorganisms make it past our lines of defense as possible.

E. Excel's Family Care products adds an additional line of defense, protecting us from microorganisms *before* they can enter our body!
